ECO-FRIENDLY COMPRESSORS

1

Highly reliable and durable

The advanced design of the non-friction, twin screw airends enables the DIS series compressors to generate consistently steady streams of air. The special bearings incorporated into the airends are carefully selected for use with twin screws and are highly reliable and durable.

2

High efficiency and low fuel consumption

The engine speed control system, developed by Denyo, incorporates a highly efficient screw that saves fuel and improves performance at all rated conditions, and guarantees high overall operating efficiency from no-load to full-load conditions. Fuel consumption has also been significantly improved at light and medium load level.

3

User-friendly operational panel

The control panel on the DIS series compressors has been placed on one end of the unit for easy operation.

DIS-130LR

DIS-655LRS

Automatic air bleeder

The DIS series compressors no longer require air bleeding, thanks to the development of an automatic air bleeder and emergency shut off device.

Easy inspection and maintenance

Compressors are equipped with a large-sized door and single-side access for daily inspection and easy maintenance. Also, the hood is designed for easy disassembly for maintenance and cleaning of the engine, radiator, compressor oil cooler, and fuel tank replacement.

4

Low noise level

These small, lightweight compressors are equipped with a unique soundproofing system. The average value of noise at a distance of 7m is 64-76dB(A) at rated operation.

Clean Engine

The engine equipped with the Close Breathing System which keeps the blow-by gas in the machine, and the aluminum radiator which does not cause lead pollution is categorized as a construction machine that satisfies the emission gas regulation stage 3(55LB,70LB,130LB,130LB-C,70LB-C) stage 2, enforced by the Ministry of Land, Infrastructure and Transport.

5

Emergency shut-off device standard equipment

If a malfunction occurs, or the oil level in the engine drops too low (DIS-1300UB and 1850SB), the emergency shut-off device will automatically illuminate a warning light and stop the engine.

Malfunction		DIS-55~90	DIS-130~1850
Compressor	High discharged air temperature	○	○
	High water temperature	○	○
	Low lube oil pressure	○	○
Engine	Discharge battery	○	○
	Low engine speed	—	○
	Low residual tank pressure	—	○

○: Shut-off device —: No device

6

Air bleeding no longer necessary

Unlike larger units equipped with automatic air bleeder or emergency shut-off devices as standard equipment, the DIS-90 and smaller units no longer require air bleeding. The engine can be started at any time without air bleeding. For more information, refer to the emergency shut-off device and automatic air bleeder sections on the back cover page.

Salt damage virtually eliminated

DIS-600 and larger compressor models are coated with an anti-corrosive substance that prevents damage due to salt and moisture, and stainless steel bolts have also been used on the exterior. Denyo's high standards for electrical wiring and connector insulation have been utilized in these new and improved machines.

BOX Type

Transportation made easy

These lightweight and compact compressors feature a one-point lifting eye that makes moving the unit at the work site quick and easy.

High Pressure Type

The energy produced by this high-pressure compressor is applicable to innovative technologies and new machines.

DIS-600EHS

DIS-1070XS

DIS-1300UB

This type of screw compressors display full performance in a down-the-hole process and a large-diameter boring process and can be applied to groundimproving machines, pneumatic lifts, and concrete-blowing machines. The discharge pressure ranges from 1.03 MPa to 2.4 MPa.

The DIS-1070XS is also equipped with a two-stage discharge pressure selector to meet a wide range of application requirements.

After Cooler Type

Denyo's high-performance after cooler prevents freezing by extracting moisture from the discharging air, while also eliminating the rust and grime build-up of spattering water. This also keeps the breaker from being overheated by the after cooler.

DIS-70LB-C

DIS-130LB-C

The compressor's after cooler and oil temperature regulator make it possible to maintain a constant discharge air temperature of no more than 15°C above ambient temperature. When the atmospheric temperature is below 0°C, a discharge pipe-selecting valve in the unit routes warm air around the after cooler, preventing freezing.

A drain separator eliminates humidity generated in the after cooler by more than 70%, while a pressure-retaining valve guarantees stable elimination of moisture.

Dry Air Type

These compressors have built-in after-coolers/warmers, and so they can deliver high-temperature and dry air even if it rains.

DIS-685ESS-D

They are recommended for use in various work situations such as sand blasting and other operations that require a moisture-free work environment. These compressors are designed to supply high-temperature, dry compressed air, owing to a built-in oil separator, after cooler, drain separator and after-warmer.

One-touch switching will allow the operator to select low-temperature, dry air or high-temperature, dry air.

Host of Options

Innovative Hose Reel

Denyo has developed a sturdy, lightweight and easily attachable one-touch hose reel which can be mounted on top of compressors. With slight modifications, a single storage reel can be mounted on DIS-55-90 series models, while DIS-130-180 units can accommodate two hose reels. The units can also be stacked for effective storage.

Caster and Trailer

Trailers and casters can be fitted to generators to facilitate on-site movement. (For DIS-55 to 180 compressors are four-wheel casters or two-wheel trailer; DIS-390ES is four-wheel trailer) Bolt connectors make mounting and dismounting simple.

Fuel Line Switching Device(3-Way Valve)

On DIS-390 and larger units, this device makes it possible to switch from the compressor's built-in tank to a line for an auxiliary tank for long operation, without refueling. Models DIS-600EHS, 685ESS/ESS-D, 800ESS and 1850SB are equipped with this device as standard equipment.

Denyo

The Denyo trademark is widely recognized as a brand, and is a registered trademark in 90 countries around the world.

The specifications given here are subject to change without notice.
